DETAILED ACTION

1. This office action is in response to applicant's amendment filed on December 17, 2004.
2. Claims 1-28 are presented for examination.

Allowable Subject Matter

3. Claims 1-28 are allowed over the prior art.
4. The following is an examiner's statement of reasons for allowance: The prior art does not teach or suggest a memory device having a destructive read process having a metadata block within a block of memory, and a counter within the metadata block for being operable to track usage of a sector of memory cells associated with the metadata block as recited in the independent claims 1 and 20. Also, the prior art of record does not teach or suggest a method comprising updating an error correction code to produce an update error correction code which includes new data from a memory access cycle and an incremented counter as recited in the independent claims 6 and 26; incrementing the counter if a random number has a predetermined relationship to a scaling threshold wherein the scaling threshold is substantially equal to a number of bits for a counter divided by a usage threshold as recited in the independent claim 13; and taking an action as though an incremented counter exceeds a second predetermined counter multiplied by a first predetermined threshold if the incremented counter exceeds the second predetermined threshold as recited in the independent claim 16.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
